

Cytokinetics®

EMPOWERING **MUSCLE**  
EMPOWERING **LIVES**

We are committed to developing potential medicines that may improve the healthspan of people living with cardiovascular and neuromuscular diseases of impaired muscle function.

Some of these life-altering diseases include heart failure, hypertrophic cardiomyopathy (HCM), and amyotrophic lateral sclerosis (ALS).

By impacting the mechanics of muscle with investigational medicines that may improve muscle strength, power, or performance, we aspire to develop new medicines that may improve patient outcomes for people living with these debilitating diseases.

Powering  
the  
journey.

AVONNE  
Living with HCM
